### **DETAILED ACTION**

1. Applicant's election with traverse of group II, claims 18-29 in Paper No. 7 is acknowledged. The traversal is on the ground(s) that the additional effort to search both inventions does not constitute a significant burden on the office. This is not found persuasive because searching more than one distinct inventions in different subclasses does result in a significant burden on the patent office.

The requirement is still deemed proper and is therefore made FINAL.

#### ***Claim Rejections - 35 USC § 102***

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 18-29 are rejected under 35 U.S.C. 102(b) as being anticipated by Williamson (US 6274041). Williamson('041) discloses a two

step filter process in which a first stage filter removes bacteria via a porous charged web filter (12) followed by a second stage filter (11) which may be among other things activated carbon (granules or block type). Fig. 2 and 4 show the recited 3 stage filters.
